**Waters Network Systems' PSX and PSL1008** switches provide the ultimate in flexibility for small to medium sized workgroups. The 1008 models are compact eight and nine port switches that deliver power, performance and reliability in a cost-effective, space saving design.

The PSX and PSL1008 switches are designed to be used outside the wiring closet in the end-user workspace. Ideally suited for small workgroups, classrooms, home or office applications, the PSX and PSL1008 models allow multiple users to attach to a single drop of cable. The internal power supply assures years of reliable operation.

Twelve models are available to support the connectivity demands of any fiber or copper based LAN. All models provide 8 10/100Base-TX copper ports with options for an additional 100Base-FX, 1000Base-TX, 1000Base-SX or 1000Base-LX port configurations. The dual media configuration provides an ideal solution for future migration from an existing Fast Ethernet fiber-based LAN to Gigabit speeds.

### Features and Benefits

- **802.3x Flow Control.** Compliant for full duplex and back pressure flow control for half duplex.
- **MDI/MDI-X function.** All models provide auto-cross negotiation, eliminating the need for cross over cables.
- **QoS supports layer 4 classification.** In addition to 802.1p Priority Queue support, the PSX-1008 models also support programmable higher layer classification and prioritization to enable enhanced QoS for real time applications based on information passed from Layer 2 to Layer 4 such as VoIP.
- **Port mirroring on the PSX-1008s helps monitor the network.** Port mirroring copies traffic from a specific port to a target port. This function helps track network errors or abnormal packet transmission without interrupting the flow of data.
- **VLAN capable for performance and security.** VLANs are used to isolate traffic between different users and thus provides better security. Limiting the broadcast traffic to within the same VLAN broadcast domain also enhances performance. The PSX models support 802.1Q Tagged VLAN, Protocol VLAN, GVRP supported VLAN ID and up to 256 groups.
